

This cloud-based data management, development and deployment platform is purpose-built for the public sector, enabling Augmented Reality (AR) based mobile and web applications for smart cities.

A Data-Driven Platform to Enable the Smart City

SPEED development with a single platform for connecting to a diverse set of data sources

DELIVER compelling urban mobility & exploration applications with CivicAR capabilities

GAIN actionable intelligence with a dashboard for reporting and analytics

A Platform for Data Management & Integration

Smart Cities are increasingly investing in the Internet of Things—connected infrastructure and sensors spread throughout the city. The CivicConnect® Platform provides a data management and development platform that enables cities to deliver applications to better serve their citizens, visitors and city workers. The platform integrates and manages a wide range of data sources for applications built on the CivicConnect Platform.

Applications & Analytics to Serve the Smart City

The CivicConnect Platform enables cities to take back the relationship with the user, helping them not only better serve but better understand them. The platform, powerful applications that can be developed on top of the platform and the growing suite of pre-built applications allow cities to gain actionable intelligence from the data and analytics.

CivicAR® Mobile Platform for a Compelling User Experience

To provide a compelling user experience, the CivicConnect Platform provides support for the CivicAR Mobile Platform. Augmented Reality (AR) overlays rich data and information on real world objects, triggered by either a precise geolocation, pointing direction, image or object recognition, and presented through the camera view of a mobile device. AR enables governments and public sector agencies to deliver information and services directly to citizens and communities in a mobile and context-specific way.

CivicConnect Platform for the Complete Smart City

The platform enables rapid deployment of any of our CivicConnect product applications, or custom applications developed using our public sector specific APIs. These APIs and platform capabilities continue to grow and expand to build your complete smart city.

“ CivicConnect is pioneering a powerful, multi-purpose platform. Build a first quick starter app to-day. When you are ready to expand, you already have the tool and the knowledge to use it. This is an important evolution in smart city software. ”

—Jesse Berst, Chairman
Smart Cities Council

Built for the Public Sector

Speed development with predefined datatypes and schemas for the public sector.

Data Management

Integrate and manage structured public data sources, commercial data sources and unstructured data sources in a single repository. Allow for data sharing and connectedness across platform-enabled applications.

Mobile Ready

Develop applications that engage citizens and visitors with iOS and Android application support.

CivicAR Augmented Reality

Create a compelling, contextual experience through AR enabled mobile applications that overlay rich data and information on the real-world with the integrated CivicAR Mobile Platform.

Extensible

Integrate systems such as payments or reservations, providing an end-to-end experience in each of your platform-enabled applications.

Analytics

Better understand and meet user priorities and preferences, and enhance city responsiveness through actionable analytics.

Open Source

The platform is built on top of industry standard open source components that reduce the costs of licensing and maintenance. This also enables rapid application development, flexible data integration and technology adaptation to help future-proof your smart city solutions in this rapidly changing technology environment.

Proven

CivicConnect Urban Mobility, CivicConnect Economic Development and CivicConnect Asset Management are built on top of the CivicConnect Platform.

CivicConnect provides a suite of augmented reality-based mobile applications and a data management and deployment platform for Smart Cities. Initially focused on urban mobility, the cloud-based CivicConnect Platform enables the rapid deployment of applications while providing valuable data for analysis. CivicConnect products are based on fifteen years of public sector experience.
